

ANDREI JILIAEV

High Jewellery Designer

Designer | Sculptor | CAD/CAM Artist

Creative Development & Visual Direction

Toronto | Canada

ANDREI JILIAEV

Jewellery Designer | Creative Consultant
| CAD/CAM Artist

Award-Winning Jewellery Designer with more than three decades of experience in design, collection development, CAD/CAM innovation and luxury product creation.

I am particularly drawn to sculptural forms, architectural composition, and the exploration of volume within wearable objects. My work is inspired by movement, structure, and the relationship between light and form, transforming these elements into jewellery that feels distinctive, expressive, and timeless.

I enjoy creating statement pieces and high jewellery collections with a strong visual identity and a unique sense of character. Whether developing a sculptural bracelet, an architectural necklace, or a couture one-of-a-kind creation, I am constantly exploring new ways to balance artistic expression with technical precision.

Alongside high jewellery, I have a deep appreciation for bridal design. Rather than repeating traditional forms, I am interested in reinterpreting classic jewellery through a contemporary lens — creating what I consider a new classic: pieces that honour tradition while introducing fresh proportions, structure, and individuality.

Unlike many concept-focused designers, my work is grounded in a comprehensive understanding of jewellery construction, engineering, craftsmanship, and technical development. Every design is developed with careful consideration of construction, wearability, engineering, and craftsmanship, allowing artistic vision and technical feasibility to coexist throughout the entire creative process.

My multidisciplinary approach combines hand rendering, CAD/CAM development, wax-form refinement, concept development, professional photography, macro imaging, digital retouching, and visual presentation. This allows me to guide a project from its first sketch to its final realization while maintaining a consistent creative vision at every stage.

Selected Recognition

- JCK Jewellers' Choice Award Recipient
- GIA International Design Award Recipient
- Canadian Jewellery Design Award Recipient
- Multiple National and International Jewellery Design Competitions
- First Place Winner, Architectural Design Competition (2007)
- Award-Winning High Jewellery Collections

Areas of Expertise

High Jewellery Design • Collection Development • Creative Consulting • Design Direction • CAD/CAM Development
• Luxury Product Development • Concept Development • Professional Jewellery Photography • Hand Rendering & Illustration • Visual Presentation • Advanced Digital Retouching

ANDREI JILIAEV

Nocturne

A high jewellery bracelet defined by contrast and depth.

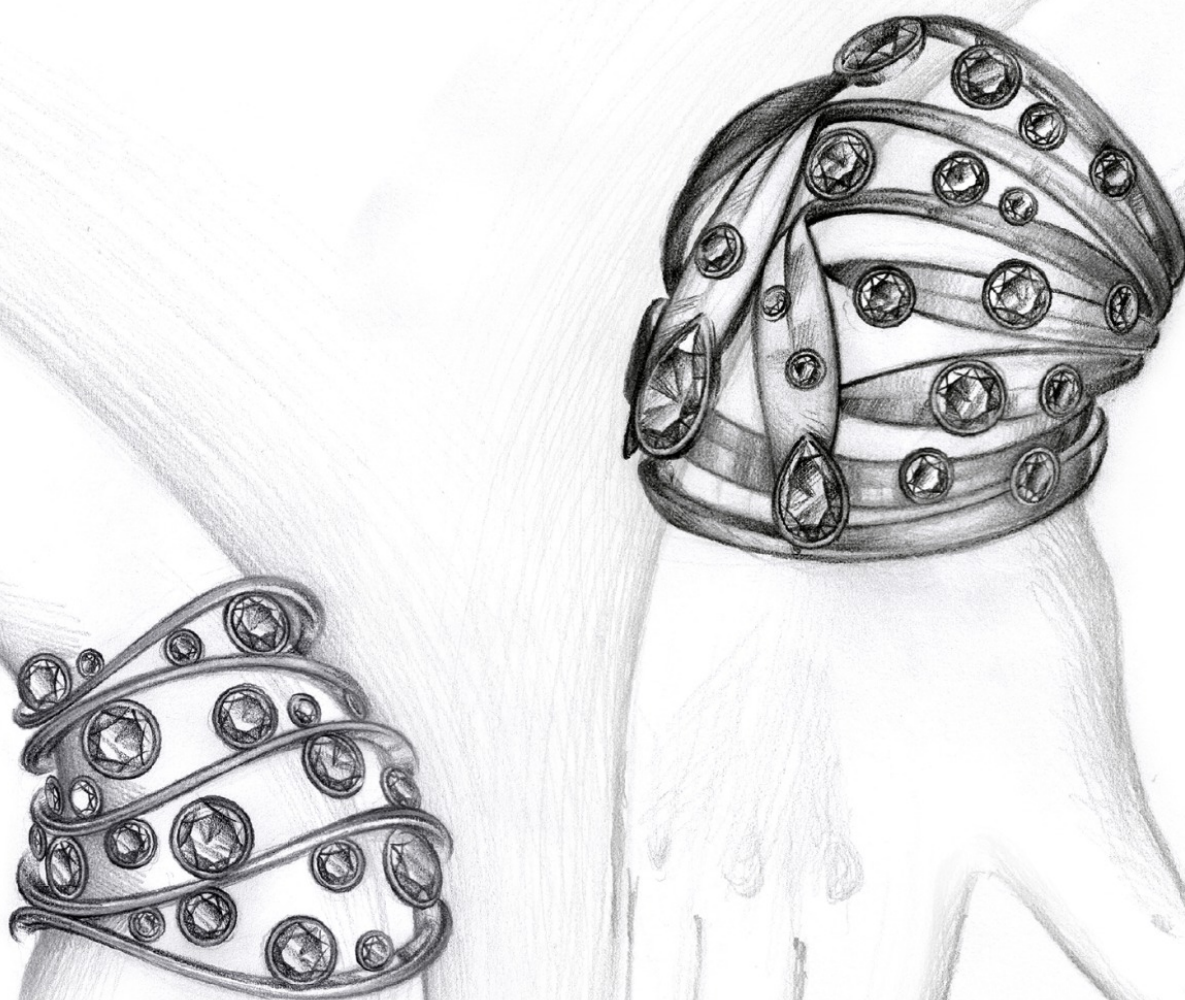

Black diamond pavé creates a dark textured field, while flowing white gold forms set with brilliant-cut diamonds introduce light, movement, and sculptural rhythm. The design explores the dialogue between shadow and illumination through layered organic architecture.

ANDREI JILIAEV

Rosée

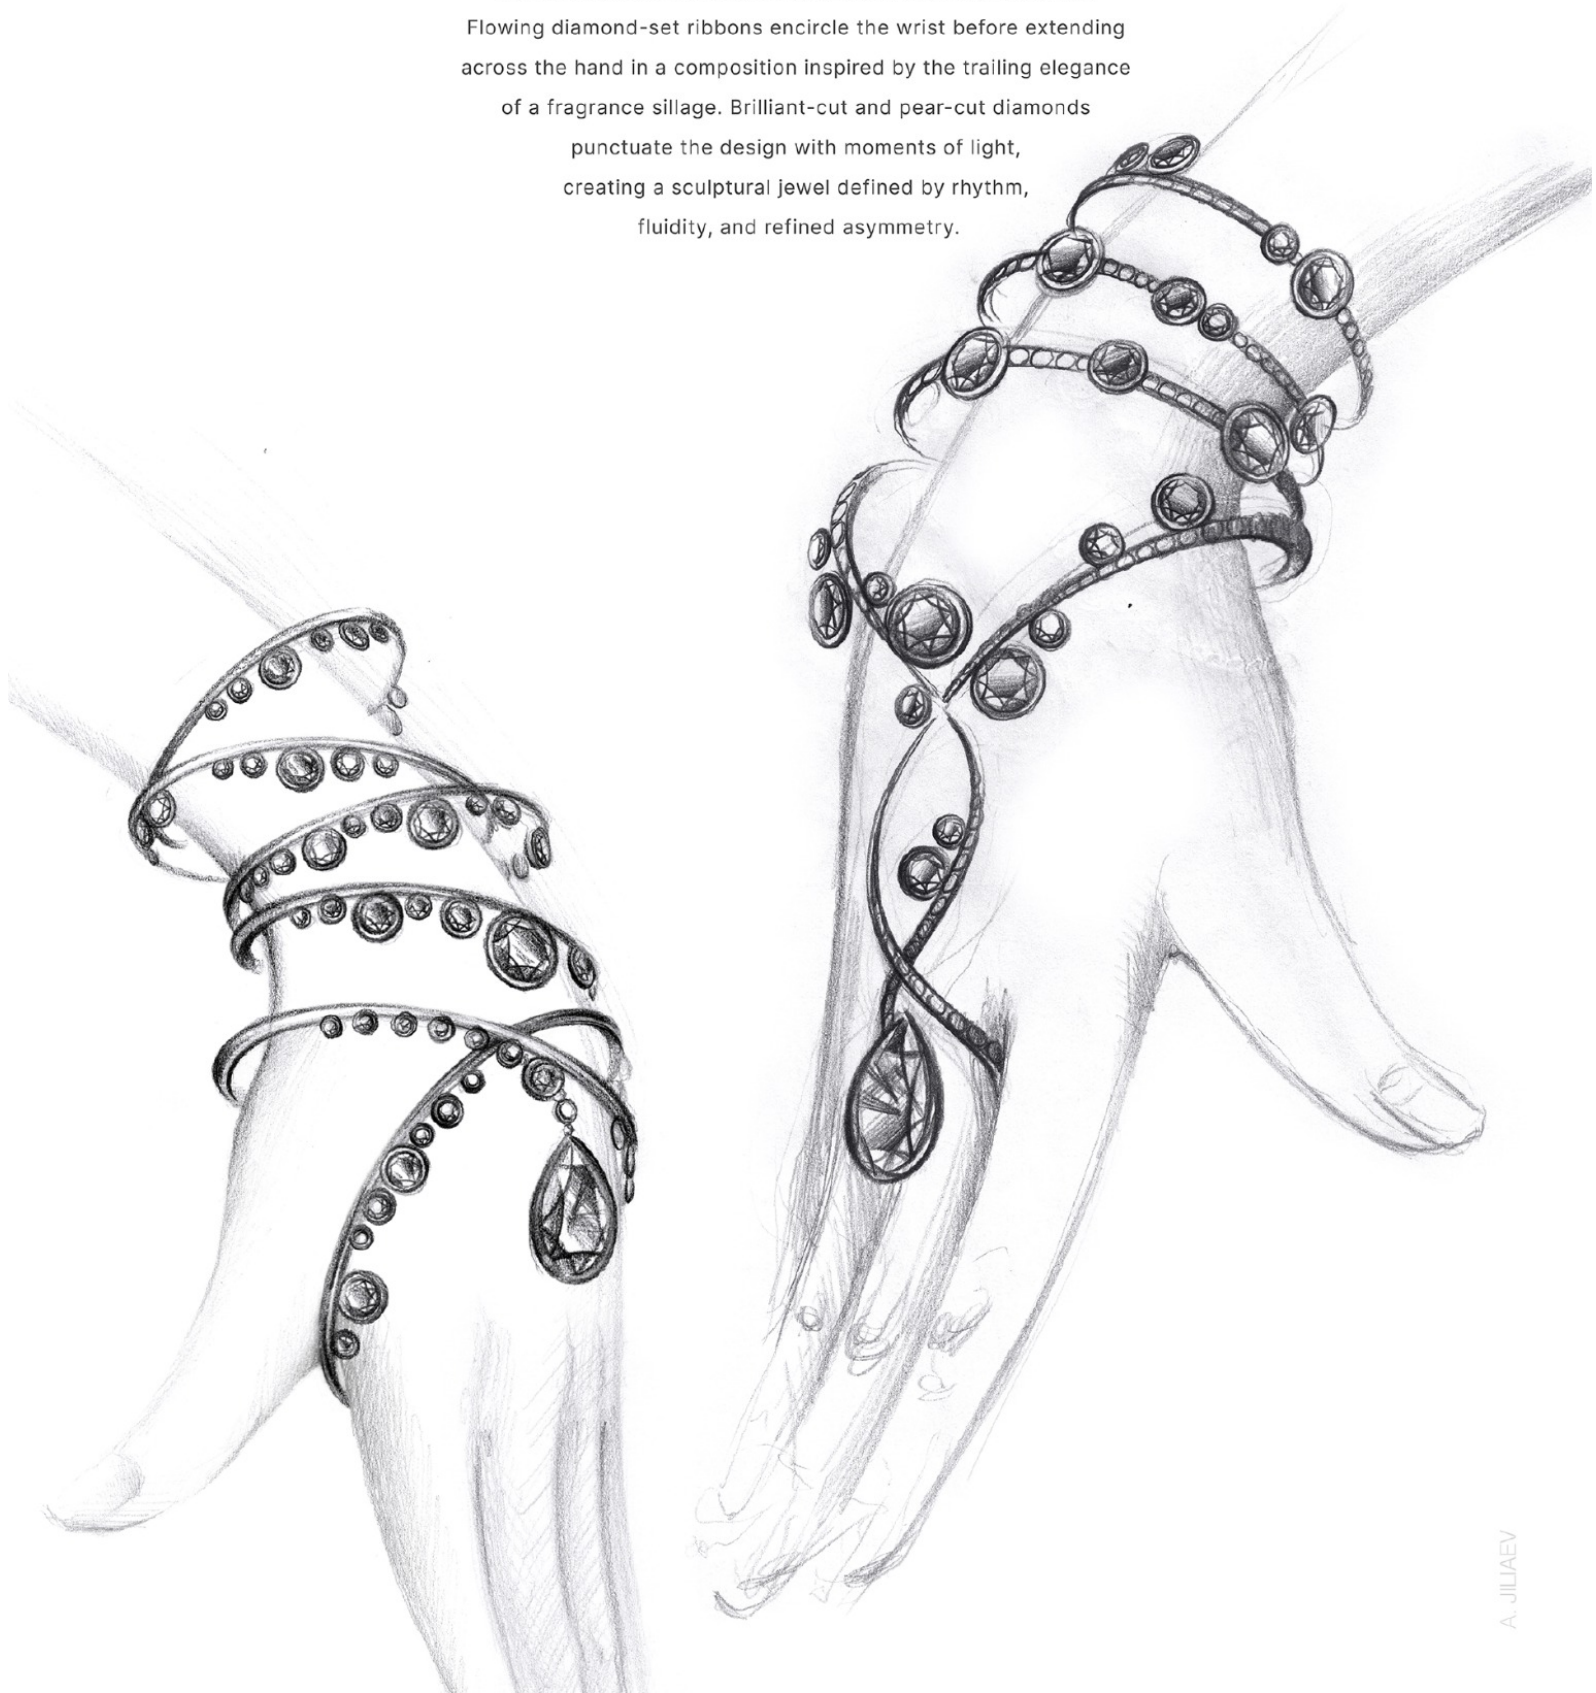

A sculptural high jewellery bracelet inspired by the delicate movement of morning dew across flowing surfaces. Crafted in white gold and accented with brilliant-cut diamonds, the composition explores rhythm, softness, and fluid asymmetry. Scattered diamond elements create the impression of luminous droplets suspended across layered ribbons of light.

ANDREI JILIAEV

Sillage

An exploration of movement translated into high jewellery.
Flowing diamond-set ribbons encircle the wrist before extending
across the hand in a composition inspired by the trailing elegance
of a fragrance sillage. Brilliant-cut and pear-cut diamonds
punctuate the design with moments of light,
creating a sculptural jewel defined by rhythm,
fluidity, and refined asymmetry.

ANDREI JILIAEV

Verdelle

A high jewellery necklace inspired by Art Deco symmetry and ceremonial architecture. Crafted in white gold with emeralds and brilliant-cut diamonds, the composition explores rhythm, geometry, and refined vertical movement.

ANDREI JILIAEV

Luna Pearl — Couture Realization

Sculptural high jewellery ring featuring a South Sea pearl, pavé-set diamonds, and flowing architectural white gold forms. Developed through hand sketching, CAD modeling, and final production realization.

ANDREI JILIAEV

Seraphine

A transformable high jewellery ring exploring movement, light, and botanical elegance.
Sculptural diamond-set forms embrace the central solitaire through flowing organic
lines, balancing architectural precision with fluid femininity.

"Winner - 2016 Canadian Jewellers Award of Excellence"

ANDREI JILIAEV

Equus Crown — Concept Exploration

A series of exploratory sketches investigating the architectural language of the Equus Crown collection. Inspired by ceremonial structures, equestrian iconography, and ornamental symmetry, the studies explore rhythm, silhouette, and sculptural storytelling through evolving ring forms and decorative compositions.

ANDREI JILIAEV

Equus Crown — Final Design Development

Refinement studies focused on silhouette balance, ornamental rhythm, gemstone placement, and architectural proportion. The final composition translates ceremonial equestrian symbolism into a sculptural ring form defined by symmetry, elevation, and dimensional layering.

ANDREI JILIAEV

Unda

Pendant Concept Exploration

Unda originated from my fascination with the movement of water and the constantly changing forms created by waves. The project explores how fluid natural motion can be translated into wearable sculpture while maintaining balance, asymmetry, and structural clarity.

Centered around a luminous mother-of-pearl element, each concept investigates a different interpretation of wave movement through flowing gold forms and layered organic contours.

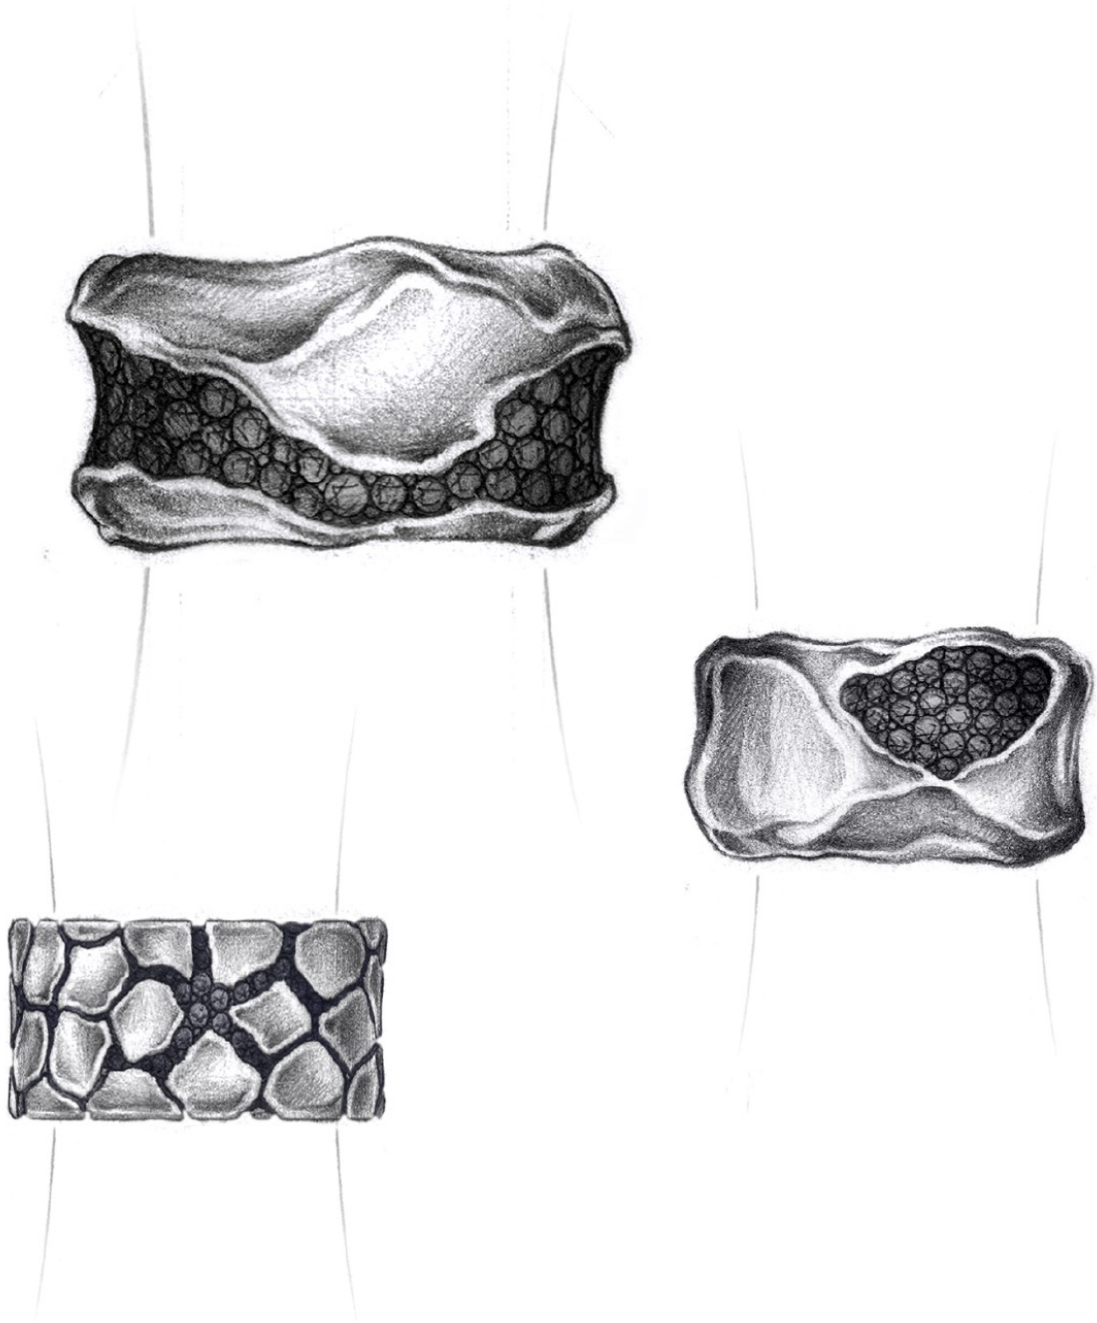

ANDREI JILIAEV

Rift

Men's Ring Concept Exploration

Rift originated from my fascination with the tension between erosion and structure. The design explores how fractured surfaces and architectural openings can be combined within a contemporary men's ring while maintaining clarity, balance, and wearability.

Crafted in white gold and accented with black diamonds, the composition creates a dialogue between light and shadow. Layered contours reveal depth and movement, transforming a simple band into a sculptural architectural form.

ANDREI JILIAEV

Veluor

Veluor began as a study of volume reduced to its simplest form. Rather than relying on complex structure, the project explores how a continuous diamond surface and flowing contours can create presence through restraint.

The objective was to develop an earring silhouette that feels soft, sculptural, and timeless, while maintaining a strong sense of light reflection and wearable comfort.

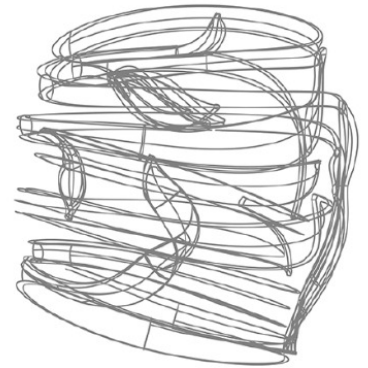

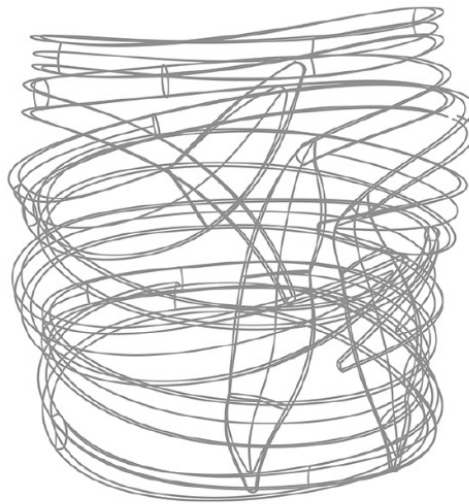

ANDREI JILIAEV

Couture Bracelet — CAD Development

Independently developed CAD/CAM bracelet study exploring structural layering, organic movement, gemstone integration, and advanced construction solutions for high jewellery production.

The project documents the evolution from conceptual framework to refined three-dimensional architecture.

ANDREI JILIAEV

Rosée — Architectural Bracelet Development

This project originated from my interest in translating organic growth patterns into wearable architectural structures.

Developed through an extensive exploration of layered structure and dimensional movement, the bracelet investigates how fluid forms can be integrated into a highly architectural composition. Through extensive design development, CAD/CAM modeling, and wax-form refinement, the project evolved into a complex framework designed to support both visual lightness and structural integrity.

The study focuses on proportion, stone integration, and construction feasibility, combining sculptural movement with the technical requirements of high jewellery production.

ANDREI JILIAEV

Rosée — Final Couture Realization

Final realization of the Rosée
couture bracelet concept, developed
through original sketch exploration,
CAD/CAM structural studies, wax-form
refinement, and advanced
production execution.

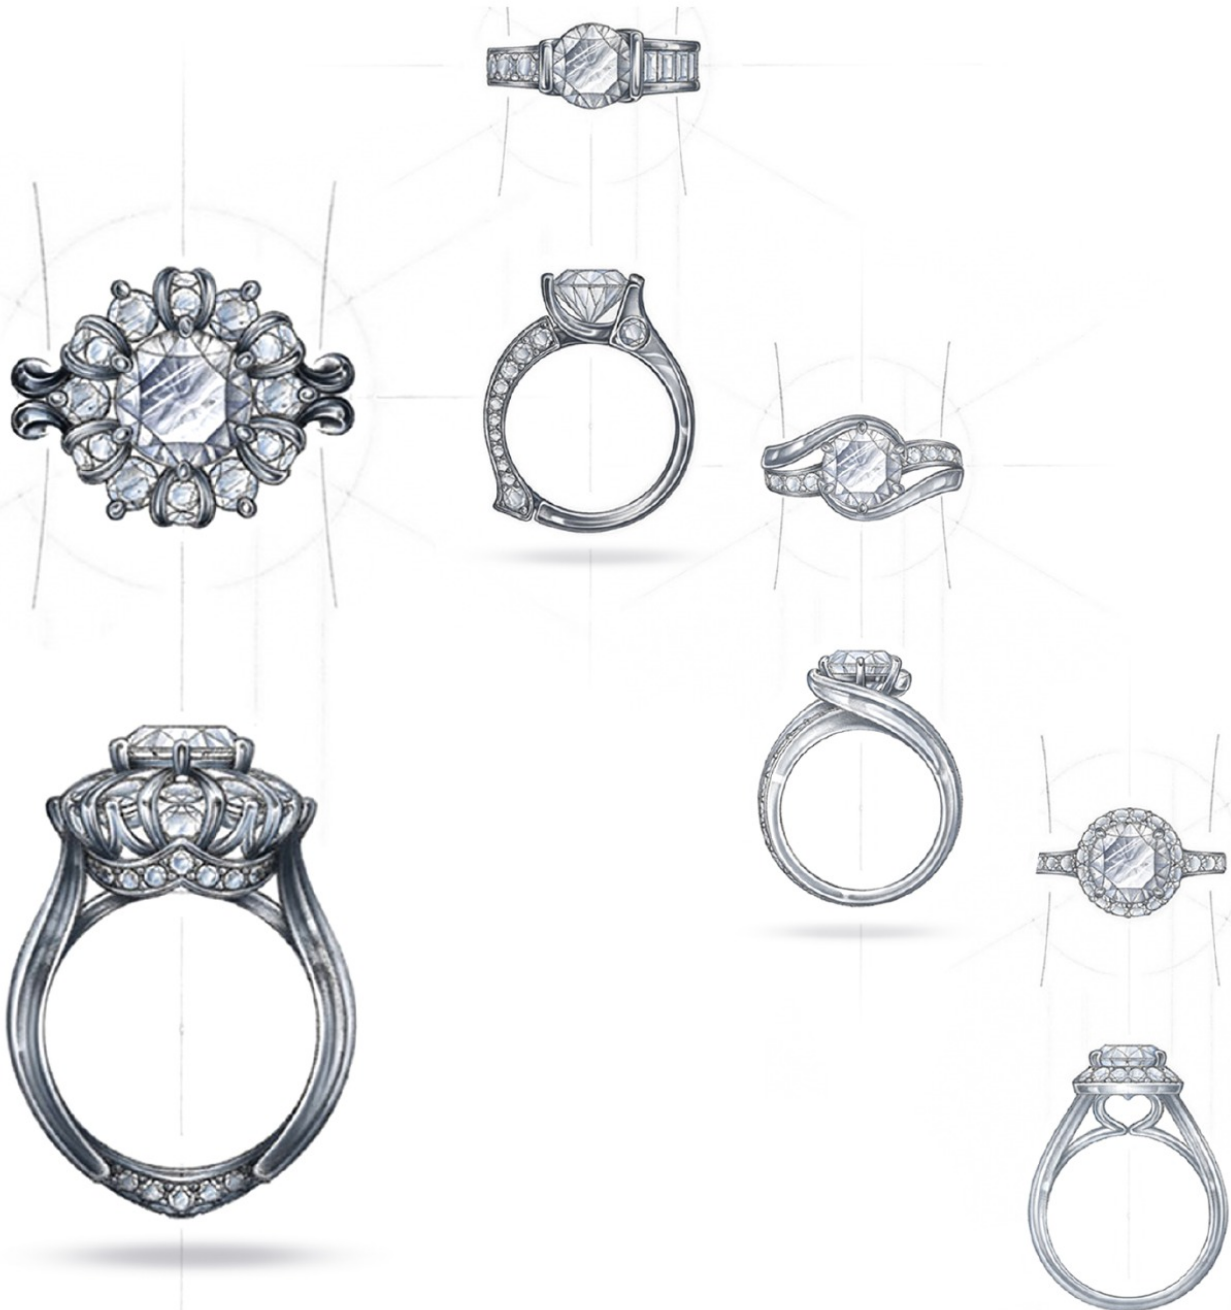

The piece explores dimensional
layering, organic movement,
and precision stone integration
within a sculptural high
jewelry structure.

ANDREI JILIAEV

Bridal Couture — Concept Exploration

Conceptual studies exploring bridal architecture, gemstone proportions, gallery design, and ornamental structure through hand-rendered development sketches.

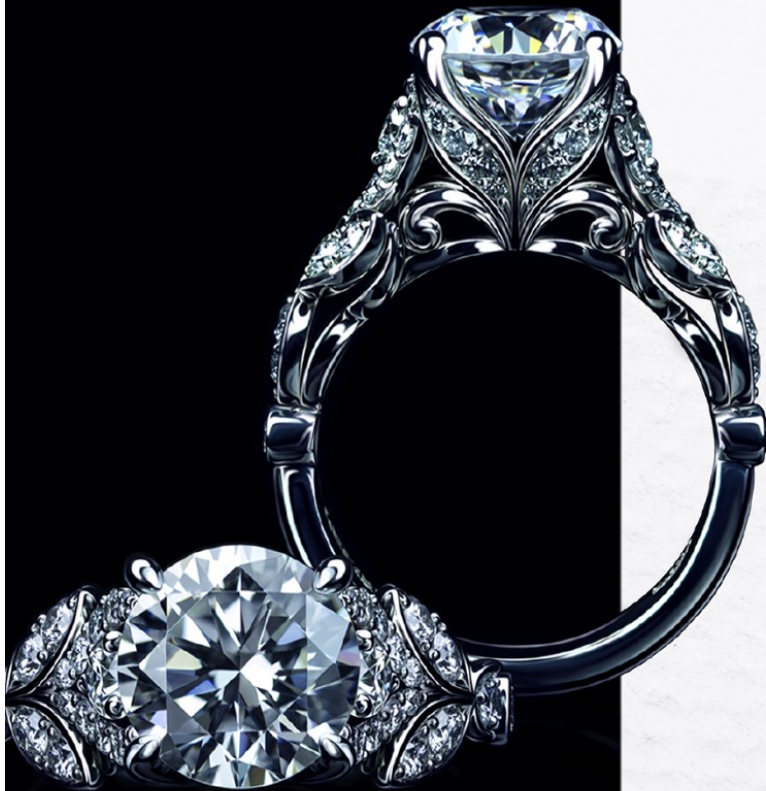

ANDREI JILIAEV

Award-Winning Canadian Diamond Ring

Award-winning bridal ring design featuring a Canadian diamond in white gold, developed through hand sketching, structural gallery studies, and final production direction.

2015 Canadian Jeweller Award of Excellence Recipient

FROM SKETCH TO REALIZATION

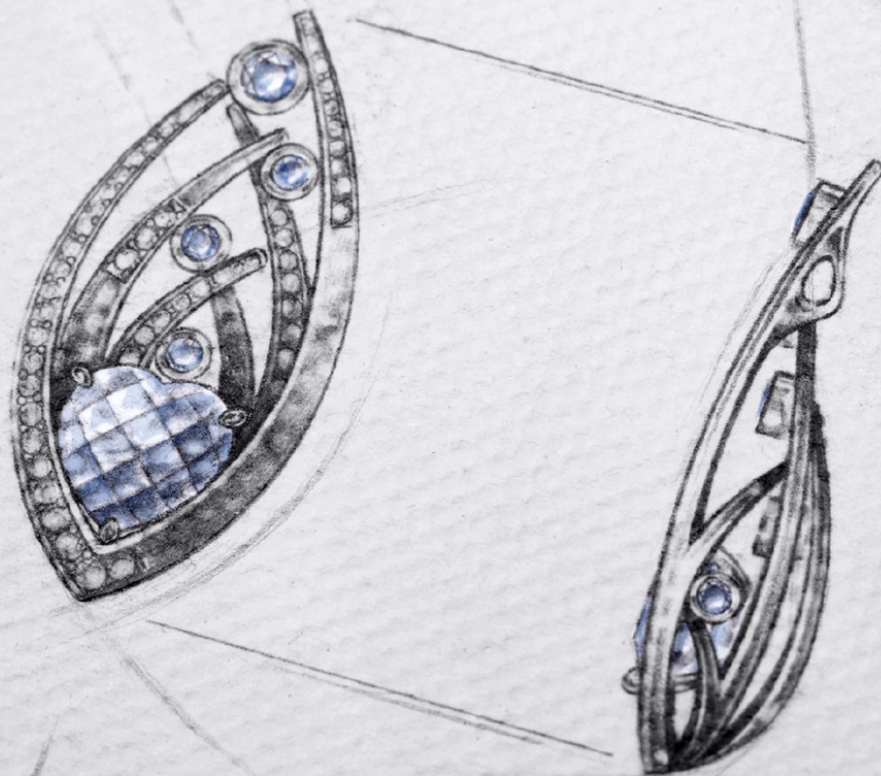

ANDREI JILIAEV

Celestia
2019 JCK Jewellers' Choice Awards

Initial concept sketches and structural studies
for the 2019 JCK Jewellers' Choice
Award-winning pendant design.

COLORED STONE JEWELRY — OVER \$10,000

ANDREI JILIAEV

Celestia
— JCK Award-Winning Pendant

Award-winning high jewellery pendant featuring aquamarine, sapphires, and pavé-set diamonds
in sculptural white gold. Developed through hand sketching, CAD modeling, and final
production realization for the 2019 JCK Jewellers' Choice Awards.

ANDREI JILIAEV

Luna Pearl

An elegant high jewellery ring centered around a South Sea pearl, celebrated for its soft luster and natural presence. The pearl is embraced by a sculptural white gold setting, accented with diamonds that enhance light and refinement. The design explores balance, fluidity, and delicate structure, allowing the central stone to remain the focal point.

ANDREI JILIAEV

Lyria

Lyria began as an exploration of how pearls could be integrated into a contemporary high jewellery composition without relying on traditional settings. Inspired by the continuous flow of water and the quiet presence of pearls, I developed a series of interwoven diamond-set forms that flow across the neckline while preserving lightness and openness.

The design investigates proportion, repetition, and structural balance, creating a composition that combines organic movement with architectural discipline.

The result is a necklace that balances softness and precision while celebrating the natural character of South Sea pearls.

ANDREI JILIAEV

Verdelle — Wax Model Development

Architectural high jewellery necklace developed through original sketch exploration, gemstone composition studies, and physical wax-form refinement.

The Verdelle project investigates symmetry, ornamental rhythm, and dimensional gemstone hierarchy through the evolution from hand rendering to sculptural prototype development.
